

Inviato

THE ENTERPRISE SECURITY ENVOY

Employees, visitors, contractors and vendors can't gain access to your facility without being authorized. Why shouldn't their computers be subject to the same authorization process?

With HudsonIT's Inviato, you control who gains access to your network.

Equipment that does not meet your Security Policy is quarantined.

Improve Security

Current security solutions available to the enterprise all assume trusted clients. Current VPN and IP address management software assume trusted clients. Many enterprise security groups trust clients based on a manual policy enforcement process, typically after a breach has occurred. Visitors, employees who regularly utilize their laptops at home, road warriors, contractors all have one thing in common: the device they use to access the enterprise network can open the network to various forms of attack. Few enterprises provide a clear solution to providing secure, trusted clients.

Access Control and Policy Enforcement

Inviato is a network access control and pre-emptive security enforcement application that protects business critical assets with patent pending threat management technology. Inviato integrates and provides centralized access to a comprehensive suite of IT security applications.

This method of pre-emptive enforcement of corporate security policies, coupled with a two-factor authentication token, will allow enterprise security groups to protect their network from rogue devices and provide a clear user audit trail for regulatory compliance issues. The solution consists of an Enterprise Security Server, which is deployed within the network and a USB-based token that is distributed to the user community. Several versions of the token exist, depending upon the needs of the user.

"a pre-emptive application of your Security Policies to the desktop, visitors, contractors and mobile users BEFORE access is granted to your network"

The Inviato solution is a hardware and software solution that directly addresses desktop security. Inviato enforces enterprise security policies and only allows trusted clients access to the enterprise's key resources. The Inviato Token, working in conjunction with the Inviato Enterprise Security Server, provides both a two-factor authentication system controlling system access and a collection of vulnerability and remediation instructions to prevent network access from out-of-compliance clients. Your client machines (local, at-home, visitors or public access machines) are secure before they get onto your network.

Solid
SOLUTIONS for
your **SUCCESS**

Inviato Enterprise Security: Securing end point devices *before* they access your network.

Inviato Benefits:

- Pre-emptive enforcement of security policies;
- Quarantines any unauthorized devices;
- Authenticates remote users;
- Centralized administration of end point devices;
- Extensible platform for enterprise applications;
- End user usage reporting;
- USB token provides secure, controlled environment for Road Warriors and telecommuters;
- Vulnerability Assessment, Patch Management, secure browsing, email and IM clients.

Inviato Token provides the following:

- Access Software (PKI and VPN)
- Secure messaging
- Secure Browser (eliminates all tracks on host machine)
- Secure Email Client
- Security Bundle
 - Vulnerability Assessment
 - Anti Virus
 - Spyware control, keystroke capture, cookies
 - Registry Control
- Corporate Security Policy Enforcement

Inviato supports Windows 98, XP and 2000 clients.

Inviato Enterprise Security Server provides the following:

- Policy Administration Module
- MAC Address / Owner Database
- Inviato Key Software Images
- Access Logs
- Report Writer
- DHCP Server (optional)
