ALLEGENT Technology Group

SolventView™ 2.5
Automated Network Security Provisioning and Management

SolventView Highlights

- ✓ **Isolate security threats and respond in real-time**

- ✓ **Visualize vulnerabilities and real threats at a glance**

- ✓ **Summary to detailed event drill-down capabilities**

- ✓ **Create and monitor application level policies**

- ✓ **Run regularly scheduled, targeted vulnerability scans**

- ✓ **Includes fully managed low-cost intrusion detection**

- ✓ **Windows, Linux, and Unix platform support**

- ✓ **Define custom alerts and notification rules**

- ✓ **Support for major security and OS vendor technologies**

- ✓ **Easily create support for new vendors and technologies**

Global Alerts Dashboard

Vulnerability Discovery Details

SolventView™ from Allegent protects business-critical assets with patent pending threat management technology. SolventView™ represents the next generation in automated IT security provisioning and management.

INCREASE SECURITY WHILE EASING MANAGEMENT COSTS

Protecting the IT infrastructure means knowing what needs to be protected, eliminating exposures and threats, and responding quickly to take corrective action. And it means doing all of this in real time!

Visualize your security posture in real time and be prepared to respond. SolventView provides the information you need – when you need it – and in time to avoid threats and minimize impact to the infrastructure. SolventView is active threat management – single fully integrated solutions designed to discover assets, define security policies, scan for vulnerabilities, detect and manage intrusions, and analyze events.

PREVENT EXPOSURES. PROACTIVELY AND CONTINUOUSLY

Protecting the infrastructure starts with identifying critical enterprise assets. SolventView automatically discovers and profiles important IT resources, recording system level, application version, open ports, and available IP services. This is the foundation for exposure detection and remediation.

Using SolventView, you are then able to deploy standard configuration policies and audit them for compliance. SolventView automatically scans critical assets and generates alerts when vulnerabilities are detected or systems are out of compliance. The graphical policy administration feature allows you to define asset groups, alert types, and responses. Create discovery plans based on templates, set scan and frequency times, and review current status. This policy-based configuration approach allows you to define which services are allowed, required, and denied for different groups of assets.

The vulnerability assessment feature uses a comprehensive vulnerability database that is kept up-to-date automatically. With SolventView, vulnerability management is an automated security process that works proactively to eliminate security threats.

DETECT INFRASTRUCTURE ATTACKS AND PROBES

Detect external reconnaissance activity, denial of service attacks, malicious code, and other network intrusions with a fully integrated Snort intrusion detection and management solution. SolventView's IDS alert dashboard provides advanced alert notification – to the console or via e-mail. The IDS administration interface provides complete tuning capability and control over sensor configuration. Intrusion signatures are always up-to-date via links to the rules database. Manage and coordinate intrusion detection cost effectively with SolventView.

ALLEGENT Technology Group

ALLEGENT Technology Group
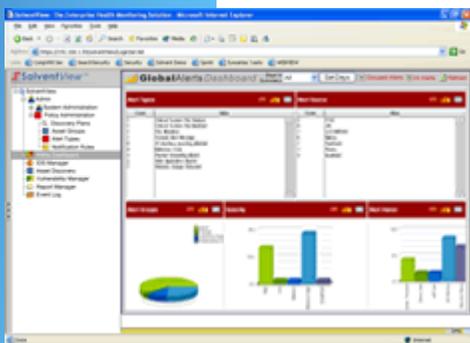

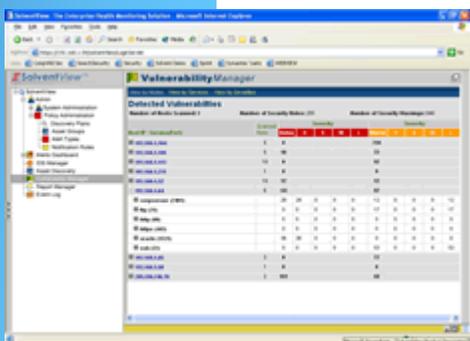

SolventView Benefits

- ✓ **Single management platform improves IT security operations**
- ✓ **Robust analysis identifies and stops attacks earlier while lowering threat levels**
- ✓ **Rich detail increases performance and security of existing assets**
- ✓ **Automation improves efficiency and increases accuracy**
- ✓ **Integrated approach lowers operational and capital expenses**

IDENTIFY REAL THREATS AT A GLANCE

Quickly identify and respond to high risk threat scenarios. Identify real threats in time to make a difference – and without having to manually sift through rows of event information or compare data from multiple sources. All of the information needed to protect your infrastructure is available. SolventView collects and correlates events and data from devices throughout the network - seamlessly. It classifies event types independent of the source technology – IDS, firewall, antivirus gateway, OS, and other assets. Out of the box filters and rules get you up and running fast.

Because performance is an important indicator of system health and security, SolventView closely monitors device CPU, memory, and disk space performance parameters of mission critical assets.

COMPREHENSIVE REPORTING AT YOUR FINGERTIPS

Capture and communicate the big picture as well as the details. SolventView provides complete and informative reporting for both management and technical staff. Charts and summaries give a view of the entire security environment while detailed drill down data gives engineers the information needed to understand, track, and remediate problems effectively. Reports include multiple views of top threats, policy violations, attack types, detected incidents, and vulnerabilities. Reports can be scheduled for generation automatically and in multiple output formats.

### THREAT MANAGEMENT THAT IS INTUITIVE, FLEXIBLE, SCALABLE

SolventView delivers rich threat management capability through a graphical, browser-based visualization and configuration platform. The global dashboard provides complete definition and administration of policies, configurations, and alerts. SolventView system access is role-based and provides full control over user access rights and permissions. Event data can be secured and segmented by users, domains, and groups.

SolventView distributed agent and analysis architecture ensures tight integration and enterprise scalability. An extensive set of agents collect and manage data from a broad range of sensors and sources including syslogs, Windows and Linux OS, SNMP, Checkpoint, Symantec, Cisco, Snort, ISS, and Cyberguard among others.
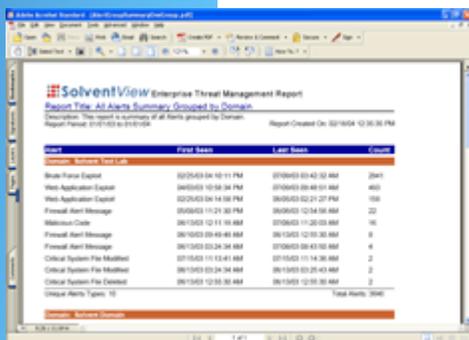

SolventView provides added intelligence and increased command and control over the elements of your infrastructure to ensure complete protection.

DEMAND MORE FROM YOUR SECURITY SOLUTION

Many businesses don't believe they have the security expertise, staff, or capital needed to get them to the next level of security protection. But today there is no reason to leave your IT business infrastructure open to threats. SolventView technology delivers unprecedented levels of threat protection ensuring safeguards are effectively in place and protecting your business – ***Active Threat Management Every Day and Automatically.***
